

ARGH! ZOMBIES!

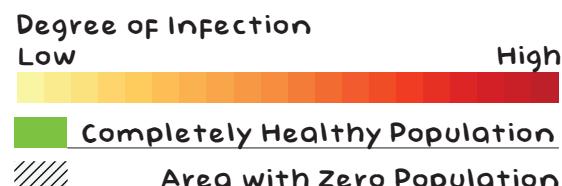

what would a hypothetical zombie outbreak in Singapore look like?

We answer your questions with the aid of a few maps!

First, we identified the area with the highest population density - Tampines East, and infected 3 nodes (300 people) in the area. Watch as the calamity spreads over 20 days!

Legend

What's in it for you?

1. In general, living in the North is a safe choice in the event of a zombie outbreak. (Unless it starts in the North. In which case, maybe living anywhere else would be a better choice)
2. Stay home in the event of a zombie outbreak!! The spread of zombies come from the interaction between people and zombies - if you stay home the zombies can't get to you either.
